

“ Mithi was my mentor for Self-driving Car Nano-degree. She gave us training in fundamental concepts in robotics and artificial intelligence. She really makes an effort to explain difficult concept in a way that is more relatable and easier to understand. She is also always stressing out the importance of clean code, and motivating us to go above and beyond the class material. She was a great mentor and she has always been motivating.

" Mithi was our session lead for the Udacity's "Self Driving Car Engineer Nanodegree" connect Program. She conducted sessions on a wide variety of topics like Deep Neural Networks , Convolutional Neural Networks, Sensor Fusion, Kalman Filters, etc. She is very passionate, hardworking, diligent and erudite person. She gave individual attention to each of 40 members in our class. She is very proficient in Robotics and Embedded systems and her suggestions were of a great help in our personal projects.

“ Mihi was my mentor during Self Driving Nano Degree Program offered by Udacity at Infosys Mysore Campus.

She was mentoring 41 peoples from different background working at Infosys Ltd. She mentored us on various challenging topic like Computer vision , Machine Learning , Deep Learning , Kalman Filters. She always trying to adopt new methodology to accomplish us in better understanding. She always explore out of box topic which I liked most.

" Mithi was my session lead for the Udacity's "Self Driving Car Engineer Nanodegree"- Infosys Connect Program. She conducted sessions in Computer Vision, Deep Learning and Robotics. She consistently interacted with every student one on one and put the efforts in guiding the students in doing their best. Her ability to connect with students was superior. She kept us updated by sharing the latest research and development in the domain, which motivated us to do innovation in the field. She is a driven, organized mentor who developed inspiring relationships with her students.

" Mithi was my mentor for Udacity's Self Driving carND. She has got very strong understanding of her subject. One quality about Mithi that really impressed me was her ability to improvise under different situations. She was session lead to a team of 40 engineers with different engineering backgrounds and experiences but Mithi with her sheer hard work and zero down approach made sure that concerns of each and every individual gets addressed. Not only she mentored me for just CarND program but also the one who inspired me to work on my first Autonomous RC car. Sound knowledge of her subject, zeal to teach and focused approach makes her one of the best mentors I have learned from. She is equally a good human being and a very good friend. It was privilege to learn from her.

“ Mithi was my mentor for Udacity's Self Driving carND. She has exceptional expertise in each concept involved . She is dedicated , self-motivated, methodical and very capable. She has a great insight in robotics and AI.

She is not only a great mentor but also a great motivator.

Mithi mentored me while I was undergoing Udacity's - Self driving CarND. I have to say that I am really lucky to have had an amazing mentor like her.

She has such clear understanding and strong grasp of even the minute details of each concept involved that it awes and inspires me at the same time. Her help, guidance, encouragement and the example that she set before me made me so much more focused and clearer in concepts than I had hoped for.

It's not only her technical knowledge but also the dedication, perseverance and hard-work that she put in her work, that too, far away from home in a different country, the SHEER determination of it, that I'll always like to remember her example and look back to it in my own moments of difficulty in life and I am sure I'll find strength!

I'd like to add that along with all this humble inner strength, she is a happy and full-of-life person who can make even the most boring of conversations interesting and funny! :D

I'd like to thank you Mithi for being such an awesome mentor, guide, friend and human being. It's honestly a privilege to know you. Stay just as you are. A A

It was really a nice experience to learn the Udacity's Self Driving Car ND program with Mithi as our session lead.

I greatly appreciate her efforts in clearing doubts of every student in the class, individually and also her constant efforts to teach the way in which we can understand the best. The way she changed her presentation style, adapting to methods by which it was easier for us, the students, to understand, was great.

Also I would like to thank her for the constant encouragement and support in completing the projects and grasping the concepts required in Udacity's SDC Nano Degree Program. Lastly, one thing that really inspired me was her positive attitude towards every situation and problem. I feel grateful to have a mentor like Mithi.

I got to know Mithi during our cooperation in Udacity's Self Driving Car ND capstone project. I had already noticed her active presence as a student in the slack channel but working with her got me to know her much better.

Mithi combines a lot of great qualities. Talent, determination to learn, extremely hard working, always looking to learn more. Combine that with a great character and a very young age and the potential just explodes.

I am pretty sure, she will do great things

" Mithi was my teammate for the capstone project of the Udacity Self Driving Car Nanodegree. She was easy to work with and a great addition to the team. She never hesitated to help out other team members. And even worked on their code when needed to complete the project in time. She worked a lot on the waypoint updater to ensure that the car drives around the track safely. She even created a dummy traffic light detector which helped us work on the project even though the real traffic light detector wasn't implemented yet. I wish you good luck with your future endeavors!

Maurice Loskyl

“ Straight to the point, Mithi will tell you what she needs or what we ask of her. It shows how she values her time. Seeing her git commit messages reminded me of her diligence, as well as her code comments tell how organized she is, and how considerate she is to her teammates. We were group mates and at times partners in projects or school activities both in high school and in college.
