Hexapod Robot Simulator - Bare Minimum, Fully Browser-Based

Mithi Sevilla's Hexapod Simulator is an open-source web app for ...more

3 comments · 14 reposts

README GPL-3.0 license

This project is mainly inspired by [Mithi's Bare-Minimum Hexapod Robot Simulator](#)

This project is a good example of [learn by doing](#), have fun!

A simple browser-based hexapod robot simulator built from first principles (github.com/mithi)

clarity on April 20, 2020 | next [-]

neat! how do you (or would you) model active and passive forces at the joints and endpoints?

edit: having helped build a hexapodal robot (way) back in the day, my first thought is modelling rather than games or whatnot.

A4ET8a8uTh0 on April 20, 2020 | prev | next [-]

It is both ridiculously awesome and terrifying at the same time.

Vinay Singh Robotics Enthusiast | ROS 2 & Gazebo Simulation | Embedded ...

Simulation is the backbone of robotics development.

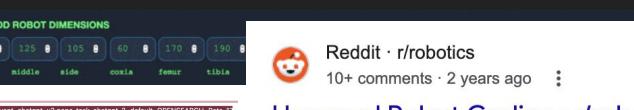

Most of the time, we get bogged down by heavy software installations just to test simple kinematics. Seeing this Hexapod Simulator run entirely on a browser is impressive!

It's a great tool for anyone trying to understand Inverse Kinematics and walking gaits without needing a high-end PC. Definitely worth exploring for those into multi-legged robot design.

nicolaskruchten Community Assistant

This is just an amazing-looking Dash app, and the developer learned Dash just to build it! So much fun

hexapod-robot-simulator 项目介绍

hexapod-robot-simulator 是一个基于第一原理和构建的六足机器人仿真器,旨在为开发者和研究人员提供一个从零开始验证机器人控制算法、步态规划以及传感器集成的平台。该项目完全开源,并支持高度定制化,适用于教育、科研和工业原型开发场景。

该项目的核心特性包括:

Hi Mithi, Chris here, creator of Dash. I just absolutely love your latest simulator app! Thanks so much for putting it out there. Good luck with your future projects :)

Hi Chris, what a pleasant surprise. I'm a huge fan of Dash! Thanks for the coffee!

still awful but hopefully wont stay so

Interested in some React fundamentals / philosophies? Check out the react-philosophies GitHub repo.

React Philosophies

In this article (written as a GitHub README), Mithi Sevilla writes a complete outline of things she thinks about before writing her own React code or reviewing someone else's React code. It's a set of guidelines more and fast rules, but it's been helpful to her throughout her career, and help you too.
